Subject: Re: Tarps not covering the VOC contaminated Area

Mr . Kaczmarek;

12/13/18-South Coast AQMD, Air Toxic and Waste Management Unit, was notified per R1166, Site Specific plan that a 1,000ppm VOCs was measured during Soil remediation activities. This exceedance requires the excavated Soil to be directly loaded into sealed bin or haul off site in sealed trailers.

Per our conversation the Excavation of the VOC impacted Soil will stop, until the waste hauler and Landfill have been selected.

Therefore please continue your weekly inspections of the plastic tarps and when repairs are made send photographs for proof.

Please see the attached photos as confirmation that repairs to the plastic sheeting were remedied. Thank you Inspector Haynes for notifying us so that we can avoid potential complaints.
